The synthetic peptide p1689 represents amino acid residues 1689-1805 of the hepatitis C viral antiqen. The peptide may be used in an assay to detect antibodies to HCV and thus to diagnose chronic HCV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10. this sequence is encoded by a Porphyremeans dintitude of the invention. This sequence represents the bank haemadoblinin protein. The polypeptides are used to produce antibodies to ordanisms associated with periodomtal disease. The antibodies are also used in purification and identification procedures, the areas and polypeptides are used as vaccines against periodomtal disease.
                                                                                                                                                                                                                                                                                                                                                                                                 sdry to

The present invention relates to a method for determining the effect of a test sample on unverginess exposing an acceptor substrate for UGUT to a labelled donor in the presence of the test sample and UGGT. The method is useful for determining UGGT activity. In particular, the method is useful for determining UGGT activity. In particular, the method is useful in glucosyltamisterase assay and kinetics measurement for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           folded glycoproteins. The present sequence was used in a sequence bomology comparison with rat UGCT (see AAF60732 and AAB72436) which was used in the method of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                determining BBCF activity, BGST is a soluble envyme of the endoplasmic reticulum which catalyses the addition of a qlucose residue onto asparagine-linked oligosaccharides, which are present on incorrectly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR96030
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 끍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  22
This protein comprises novel mouse related adhesion focal tyrosine kinase (RAFTK), an intracytoplasmic protein tyrosine kinase (FTK) involved in the modulation of cell growth and differentiation. Its amino acid sequence was adduced from a cDNA clone (see ANVI7801) isolated from a mouse brain library. It shows 95% homology with human RAFTK (see AAWAR372). RAFTK may be expressed in fost cells or in transquence animals and used to raise antibodies and to screen for compounds capable of modulating RAFTK interaction with cellular proteins. Agents that modulate RAFTK are used to control growth,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ಚರ್ಚ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid encoding vertebrate related adhesion focal tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               induced, inhibition of apoptosis where this is induced by radiation, chemotherapy or neurodegenerative disease, and also for explanding cells for transplantation, treating conditions associated with meribary-eryte abnormality, or a thrombony-oppania, and control of platelet aggregation.
                                                                                          EAFTE, related adhesion foral tyrosion kinse, mouse, protein protein tyrosine kinase, ETK, etc. stockly constituted differentiation, cell adhesion; cell migration; regulation; signal transduction; metuatasis, cancer, leukacaia, thromboo; topachia, therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              <:-

The present adjusts represents a rew polarity; PMP-2 is a statement. Pattering distinct regions: a morth domain, a system of the domain. But a remained in the domain and a cytopicasmic domain. By No orbiting the eyoplasmic tall domain. PCLP. Homology is shown to CDA in the eyoplasmic tall domain. PCLP. Homology is shown to CDA in the eyoplasmic tall domain. PCLP. Polypeptides and nucleit acids are useful for diagnosing and freeding (PDA) discuss associated ATD, selectin mediated kinding oversis, including acute and dream in mediated kinding oversis, including another and die useful in assays for selectina for therapestre acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Podocalyxin-like protein, e.g. useful for diagnosing and freating discuses associated with selectin mediated binding events

This sequence is encoded by a Purphynomias singularist case of the invention. This sequence represents the hagA haemagglutinin protein. The polymorphides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sdep

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and N. gonorrhoeac antigenic proteins. They are encoded by open reading frames (GRES) AA711972 212358. The antigenic proteins, their fragments, their nucleic acids and antibodies are used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diagnosis, prevention (as vaceines) or treatment of Neisseria infections, such as meningitis, septicaemia and genorithe. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           335 qeetaaaarrsammeglafilpfmespeersagetilyppwisslpfilonga 386

A portion (AAR96025) of P. qinqivalis (B. Laemanelutinin hadA (see also AAR96040) was identified as the product of clone SLZ (AAL9040) isolated from a P. qindyalis (B. quemic library. The haemaqqiatinin can be obtd. from transformed host cells and used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S. 12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Porphyromensas gingivalis genes and protoins - used in the detection and vaccination against perfected disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               a vaccine to protect humans or animals against periodontal discuse. 
Expression in Salmannella cells allows probn, or a live varcine. 
The backmandiation can also be used to detect the presence of anti-p, analysis anti-bodies and to raise monorload anti-bodies.
                                                                                                                                                                                                                                                                                                                                                                             Haemaqqlutinin; haqA; periodontal disease; vaccine; antibody.

This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypelides in the series of the permenting or treating thelicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic quatritis, and peptic ulter diseases, e.g. gastric and duodenal ulters. They can also be used for the production of antibodies. The products can also be used for
                                                                                                                      GHPO protein; Helicobacter intection; gastroduodenal disease; gastritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

the Rattus norvedicus belwan inc 560 which correspond to alternatively spliced unc 56 transcripts, and a homan one 563 cobx which shares homelogy with the Rattus norvedicus unc 568 cobw. Also described are assays based on protein-protein interactions between the unc 5 protein and a variety of different interacting proteins. The unce 56 variant cobnas and unc 568 common are useful in methods for identifying compounds which reduce or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Three variants of homen and 50 cDMAs (as 5CL, and 5Cs and and 5C8) and a homen unce 5HS1 cDMA, asolul in yeast two hybrid experiments for identifying unknown lumina cDMAs which encode proteins that interact with the human unce5C protein.

represent human broast, gastric and prostate CAAP protein sequence respondively. CAAPs have extractation of the buman CAAP proteins, peptides, nucleic
                                              The pergraf ferentian describes 2 markets of bunner and for dBMAs (unc-50b, unc-50c and unc-508) which correspond to alternatively spliced
                                                                                          une-5C transcripts, and a human unc-5HS1 cDNA which shares homology with
                                                                                                       the Kattus norvegious unc-SHSI coNA. Also described are assays based on partering protein interacting between the mer's partering and a varioty of different interacting proteins. The unc-St variant coNAs and unc-SHSI coNA are useful in methods for identifying compounds which reduce or inhibit the lethal phenotype associated with the expression of the unc-S death domain in yeast They are also useful in yeast two hybrid experiments for identifying unknown human coNAs which encode proteins that interact with the human unc-SC protein. AAC90914 to AAC90971 and AAMSOGAS to AAMSOGAS are present sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding breast, gastric and prostate canter associated antigen procursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human gastric cancer associated antique protein sequence SEQ 1D MO:906.

```
sequences AAAAAAA22-AAAQAS represent proteins used in a newel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites,
                                                                                                                       and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular
                                                                                                                                                          form using distance constraints imposed by disuffide buildes, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein understanding the interaction of a protein with other molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and qastroduodenal diseases associated with these infections, including acute, chronic, and atrophic qastriitis, and peptic ilder diseases, e.g. qastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for
mitheratics can be used to determine the susceptibility of a particular antibiotic to hydrolysis to incurrilisation by matant enymes. Since all possible combinations of mutations were represented within the scope of the invention, a meaningful sample could be achieved. The method of the invention allows the nessurement of successful transformants which contain a mutation linker, to determine the number of different colonies probabilities that the most and the least common codon combinations are present in the library. This can then be used to calculate the probabilities that the most and the least common codon combinations are present in the library. The libraries can also be used to produce sets of modified polypeptides such as hormones, etc. human growth hormone, in order to detect and anlyse structure/function relationships.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GMPO protein; Helicobacter infection; gastroduodenal disease; gastritis;

the present sequence represents a midE polymoptide. The polypoptide is easily for at his send in the respirite increased activity or expression of midE to treat that respirite increased activity or expression of midE to this seem to represent the mide and in varcines. The polypopties and for recombinant (or in viz) production of the midE is used for recombinant (or in viz) production of the midE expression of any properties and primers, between mutations in midE encoding encoding sequences, or measuring the expression of midE encoding encoding sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               susceptibility), also for serotypine or chromosome identification. Tiscuss which may be distincted our freshed are particularly intertion by S. rare is, but may also be intertion by Helicobarter pyiori, and assectified corers and throns.

```
invention can be used for producing transgenic plants with higher locals of protein content (e.g. 2 to 5 fold increase) and higher levels of essential amino acids. The present sequence represents the ASPI protein
                                                                                                                                                                                                                                                            The present inzention describes transcenic plants (A) comprising a determinance which encodes a protein comprising an amphibibility alpha their over a beta pleated sheet, that produces more protein per tissue weight of root, tuber, seed, lear, stem, edible portion, flower or whole plant than a normal plant. The preferrod protein is an arrificial storage protein designated AB which has been designed as a nutrificial protein for humans. Products and methods from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Prediction; secondary structure; alianment; evolutionary conservation; homology; periodicity; co-variation analysis; antiaenic site; site directed mutagenesis; interaction.

cardiovascular disorders e.g. cardiar arrest, coretrowascular disorders e.g. cerebral isotheria, andiodenesis, nervous system disorders e.g. Alzheimer's disorders e.g. andiodenesis, nervous system disorders e.g. corneal infection. The polypeptides can also be comilar disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to mainfain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAT36254 T37345 are encoded by open reading frames (OREs) of the genome of Chlamydia trachomatis (see AA261425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisonse and riboryme sequences
                                                                                                                                                                rhemolaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content. Ifpid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. Assert to AAP22315 and AAB2008 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vaccine, eye disease, ocaventional trachoma, nonendemie trachoma, paratrachoma, inclusion conjunctivitis, ential disease; perhepatitis, nonendemocoveal uretritis, epidymitis, cervicitis, salpingitis; bartholinitis, pneumopathy, venereal lymphogranulomatosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diseases such as conventional trachema, nonendemic trachema, paratrachema, and inclusion conjunctivitis, qenital diseases such as nonquencenced usertitis, epidymitis, cervicitis, salpingitis, perimpathy in breast feeding infants; and venereal lymphograculomatesis. AAF22316 to AAF22363 encode the human secreted proteins given in AAFC2316 to AAF32363 encode the human secreted proteins have and polypeptides homologous to them. Human secreted proteins have extirities based on the tissues and edit by epera are explessed in. Brangles of activities and produced immunosapprossive, antiarthrities antirheumatic; antiproliterative, cytostalic; cardiant; vascitopic; cerebroprotective; nootropic; renjoyatestic; antiproliterative opportunetrial; the polymered on the proteins can be used to prevent, freat or ameliorate a medical condition in e.g. humans mice, rabbits, goals, horses, cats, does chickens of sheep. They are also used in diagnosting a pathological condition of sheep the include autohomous discusses e.g. themesed or treated include autohomous lisesses e.g. themesed arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New macleic acid molecules encoding 48 human secreted proteins for diagnosing, preventing, treating or amelionating medical conditions and used as tood additives or preservatives \cdot

The DNA encoding this protein may be useful for the prodm. of biologically active proteins by inserting the CMA integral an expression vector and co-transfecting animal cells with another expression vector in which a gene for the biologically active protein is placed under the control of alpha-fetoprotein gene enhancer and promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Caps

The present sequence is that of a human cytoplasmict isolency; thus synthetase. The cDNA encoding for the cytoplasmici isolency if the cNA synthetase, as factated from a human feeth cDNA library. The cluMa can be expressed using expression vectors to produce the corresponding recombinant protein. The protein can be used in assays to test substances known to inhibit the isolency itwa synthetases of pathogenic cramisms. Also, expression of the isolencyl-tRNA synthetase in a testor strain can be useful for restinal substances which are capable of inhibiting its activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6.9 PELINGELAKTERPSVGTKAVNKOLIPENTSERFELHELSPYFELIKPALKOTEMETHE 1.00

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 5.6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the presents sequence represents a MACH saidas. If IMA or affine this protein sequence was isolated from a CDAA Horary of Arabidopsis thattain. The NAPH DNA and protein can be used in the development of afficient elements. They allow to the control of growth of trunstained plants to tismoob evaluation of adricatinal chemicals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4 or pysykanthymenyelli kimaetiktomalelig veritikwi strisytypidddi 465

servening polynucleatides with whole genome oligonucleatide or polynucleotide arrays -

Example 1; Page 36-37; 41pp; English.

This sequence represents a yeast GAL4/YMR117c fusion protein. YMR117c is a yeast OBP (open reading frame) which was found by two hybrid analysis to interact with the U2 shRNP-associated splicing factor, prpllp. This was used in grotel two hybrid screening methods for the identification of GAL4) Tused to a first test protein (e.g., YMR117c protein). A second by the sion protein contains a second test protein that potentially interacts with the first test protein. If the two test proteins interact, they bring the two domains of the transcriptional activator into close bring the two domains of the transcriptional activator can then bind to the corresponding transcriptional activator binding site on the reporter gene, thus effecting reporter gene transcription, and causing a detectable signal to be produced. The two hybrid assay can be used to test a large number of proteins simultaneously to determine whether they colinguarieotide probe marrix. Together, the probes encompassed all the coding sequences on the yeast genome, enabling the him district from locations and the genes encoding parties proteins to be identified. The methods of the invention thus allow large scale screening for DNA sequences that have functional utility and avoids the systematic sequencing of DNA inserts of interest that is required by prior art nucleic acids by direct hybridisation to Eight-density oligopuelectide arrays. Two hybrid assays exploit the ability of a pair of interacting proteins to bring a transactivation demain into class proximity with a DNA-binding site which regulates the expression of a reporter gene. The assay employs chimeric genes which express two types of fusion protein, one hybrid protein, contains a transactivation domain (e.g., that of interact with a particular protein. Such a two-hybrid assay was performed with a vector containing the yeast GALA/YMRITS DNA sequence and the colones encoding interacting proteins were selected. The DNA inserts of the partner proteins were amplified and hybridised to an methods. The methods can be used to screen polynacleotides, especially those from a host organism whose genome has already been sequenced.

AAC9799; to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigons, given in AAB5234 to AAB54006. The human colon cancer antigons can have expectative, cardiovarive, muscular; or uncolon cancer antigons can have called to a cancer antigons. The colon cancer antigon polynucleotides, can he used in game herapy. The colon cancer antigon polynucleotides, proteins and antibodies to the proteins are useful for the provention, treatment and diagnosis of calcon cancer antigon polynucleotides, polynucleotides, proteins and antibodies for the proteins are useful for the provention, treatment and diagnosis of calcon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, sorb as for chromocome identification, and alsorders, such as colon cancer. The system disorders, muscular disorders, reproductive alsorders, immune system disorders, muscular disorders, reproductive adsorders, immune discusses, and cardiovascular disorders AAC98774 to AAC98772 and AAB5007 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 52
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY42721
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to boman section the sello proteins of an including asset for raisible meanedoad or polyclonal and bedress as the distance of a detecting sello. Be sello pergression. The sello pergression in the sello pergression of a descriptions are also useful as discussion. The sello pergression is the formal and the product of Although Pergris in the treatment of Although's discussion is also useful for identifying agents eighble of a description usangs for identifying accurate the production usangs for identifying accurate raising and interfering with the felicipited paragraph that lead to Althougher's discussion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New names set to propper testind their econdrist polymericalides, useful for carsing antibodies for detecting set-to polypeptide expression and as drug targets in the treatment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   So to HER HER HERSHILF FAREES (WALLAS) WE CANNELS THE DESCRIPTION OF THE

registance to issectivides have led to a resurrence of mataria in many parts of the world, and there is a pressing need for vaccines and new and pharps. AAA70078 to AAA70287 and ABBINHA to AABINHA to APBINHA in the result of and protein sequences given in the protein in the which are not specifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the present invention describes proteins and their framents (1) encoded by chromosome 2 of the human material parasite. Flashedium talciparin, Also described are: (1) mucleotide sequences (1) encoding (1); and (2) vaccines against P. talciparum intection, comparised (1) or (1).

(1) and (1) are useful for the development of vaccines against antibody raised to immunoaeus comprished the sequences of (1), are useful in the detection of intection with P. talciparum. Fitthermore, (1) (especially when they are fillins or secreted or mentione profession).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    can aid the identification of drugs to freat or prevent P. falciparum intection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide now fargets for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          vaccine and drug development. Parasite resistance to drugs and musquite
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Plasmodium falciparamo chromosomo 2: Johan Malafia palabite: Vaecitee
antimalarial; malaria; protozcacide: infection; insecticide.

This sequence is an epitope tagged version of a human sel 16 protein of the invention. The human sel 16 proteins of the invention are isolated from hippocampus and mammary gland. The polypeptides can be used to alter presenting function. Compounds which inhibit either the expression or the artificity of the kaman sel-10 polypeptides may reverse the effects of mutations to presenting (PS 1) or FS 2, and therefore may be useful for the prevention or treatment of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to human sel.10. The sel.10 proteins of the invention are useful for raising monoclonal or polyclonal antibodies useful in diagnostic assays for detecting sel.10 polypoptide expression. The sel.10 polypoptides are also useful as drapped for expression. The sel.10 polypoptides are also useful as trapped for decreasing antibody levels in the treatment of Alzheimer's already to decreasing antibody levels in the treatment of Alzheimer's already to production level of Abeta. The polynucleotides are useful for developing the assays for identifying against sepable of interfering with the biological pathways that lead to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    useful for raising antibodies for detecting sel-10 polypeptide expression and as drug targets in the treatment of Alzheimer's disease

The human sel-10 proteins of the invention are isolated from hippocampus and mammary gland. The polypeptides can be used to alter presentlin function. Compounds which inhibit either the expression or the activity of the human sel-10 polypeptides may reverse the effects of mutations to presentlin-1 (PS-1) or PS-2, and therefore may be useful for the prevention or treatment of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sel 10, human, presentlin, Alzheimer's discuse; PS-1; PS-2; hippocampus;

                                                                                                                                                                                                                                                                                                                    the invention are useful for raising monorional or polyclonal antibodies useful in diagnost c assays for detecting set 10 polypeptide expression. The same lo polypeptides are also useful as drug targets for decreasing antibody levels in the treatment of Alzheimer's disease. It is also useful for identifying agents capable of alzheimer's aftering the production level of Abeta. The polymorleopides are useful for developing assays for identifying agents capable of interfering with the biological pathways that lead to Alzheimer's disease.
                                                                                                                                                                 New human sel-10 polypeptides and their encoding polymacheotides, useful for raising antibodies for detecting sei-10 polypeptide expressing and as drap targets in the treatment of Alzheimer's disease

The human sel-10 proteins of the invention are isolated from hippocampus and mammary gland. The polypeptides can be used to alter presentiin function. Compounds which inhibit either the expression or the activity of the human sel-10 polypeptides may reverse the effects of mutations to presentlin-1 (PS-1) or PS-2, and therefore may be useful for the prevention or treatment of Alzheimer's disease.
